Transportation Engineering

Baskerville-Donovan’s transportation expertise includes a broad range of service areas, including: transportation engineering, bridge design, transportation planning, traffic engineering, highway lighting, route surveying, storm water design, environmental permitting, real property, construction administration and public involvement. Over the years, BDI has completed hundreds of large-scale transportation projects for local municipalities, counties, and both the Florida and Alabama Departments of Transportation.

The Transportation staff of Baskerville-Donovan, Inc. includes engineers that are technically qualified and experienced in the design of roadways, ranging in complexity from local subdivision streets to interstate highways. Our staff of professionals is experienced in the review, analysis and design of all roadway engineering elements. These skills include criteria compliance, drainage, maintenance of pedestrian and vehicular traffic during construction, access management, cost estimates, specifications, constructability and schedules.

We understand and are very proficient in all technical aspects of roadway design, including horizontal and vertical geometry, drainage, pavement marking and signing, signalization, lighting and landscaping. Most importantly, we are keenly aware of the rising cost of construction and allocate sufficient time and effort to the development of comprehensive construction cost estimates throughout project design phases. This enables our engineers to recommend cost reduction design alternatives whenever cost estimates exceed the allocated budget.

BDI is capable of developing a project concept to satisfy the demands of our clients and are fully staffed and experienced in effectively managing the project through design, permitting and construction. Our firm works together as one seamless team to provide our clients with the very best services in the state. Our reputation is a direct result of our enormous success in the professional engineering marketplace, and is reflected in the opinions and enthusiastic recommendations of our clients.
