## Water & Wastewater

Baskerville-Donovan’s communications strategy was established to quickly and effectively respond to our client’s projects and programs. We also understand that proper communications are necessary to develop a thorough understanding of the context within which an infrastructure project is to be developed. For this reason, we routinely arrange for extended “brainstorming” sessions at the beginning of each project. In many cases, these pre-design “charrettes” result in progressive program modifications that are beneficial to the cost, schedule or service life of the project.

In addition, BDI professionals are consistently assisting our clients in brainstorming creative solutions to larger programmatic issues. Because we are interested in achieving a comprehensive understanding of the larger program that our projects are intended to support, we find that our clients appreciate the innovative ideas that we bring to the team. In particular, BDI professionals are trained to become intimately familiar with the Master Plans, Capital Programs and other guiding documents associated with the projects that we help plan, design and construct.

BDI engineers have the experience and ability to analyze the technical, cost, schedule or regulatory issues surrounding any proposed project; our professionals become involved as required to provide advice and suggestions relative to the full range of project issues. As a local government consulting firm, one of our primary objectives is to provide our clients with the very best advice and creative input. For each project our clients can expect creative, innovative input from BDI engineers and professional staff.

An example of BDI’s communications strategy is demonstrated on the Bay County’s Actiflo Regional Water Treatment Facility. BDI’s experienced staff spent a couple of meetings of listening and brainstorming the needs and desires with the County’s Utility Managers and Operational Staff. The result was that the BDI Team innovatively designed a unique state-of-the-art ballasted flocculation process for a 48 MGD water treatment facility which achieved the client’s goals and a better level of treatment.

As indicated above, the BDI Team understands the important role that information management plays in completing projects on schedule and within budget. In fact, our experience has consistently shown that successful local government projects are always characterized by efficient, proactive project communications. BDI’s approach includes complete communication and understanding of our client’s desired project result and the associated flow of information. The Baskerville-Donovan Team looks forward to the opportunity to brainstorm innovative solutions with our clients and the amazing results that we develop together!

Baskerville-Donovan, Inc. is proud to have provided Professional Engineering services for the following Florida Wastewater clients:

Brevard County  
Seminole County  
City of Dade City  
City of Vero Beach  
City of Tallahassee  
Sarasota County  
City of Titusville  
City of Sarasota  
City of Panama City  
Desoto County

As a result of many years of professional service and dedication to our clients, it is our pleasure to have been recognized for outstanding service by the communities we serve. Some of the awards received include:

### Hulburt Field Air Force Base Advanced WWTP

The success of this project was recognized when the facility received a First Place National Award for Medium Sized AWT Facilities in Operation and Maintenance from the US Environmental Protection Agency in 1998

### Destin Water Users Reuse Facility & Various Ongoing Projects

DWU's wastewater treatment plant received the Excellence Award nine times in the years 1988-2001 for "Outstanding Operations for a Type I Wastewater Treatment Plant in the NWFL District" and EPA Reclamation & Reuse Award 2000.

### Bay County Utilities Services Military Point Regional Advanced WWTP

2001 FICE Grand Excellence Award  
2002 Dr. David York "Water Reuse" Award  
2003 Phelps "Plant of the Year" Award by FWEA

### City of Milton Wastewater System Improvements

Second-Place Winner of the 1996 US EPA "Operation and Excellence Award"  
(Small Secondary Plant Category)

### South Walton Utility Company Biosolids Processing

2001 Florida Department of Environmental Protection Wastewater Treatment Plant of the Year

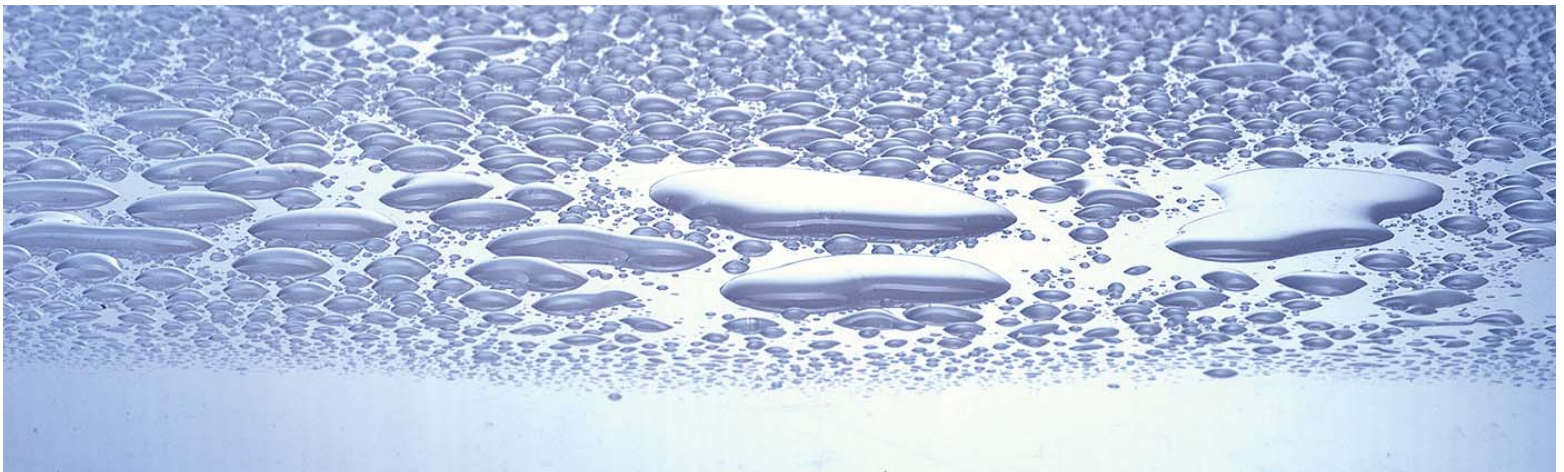

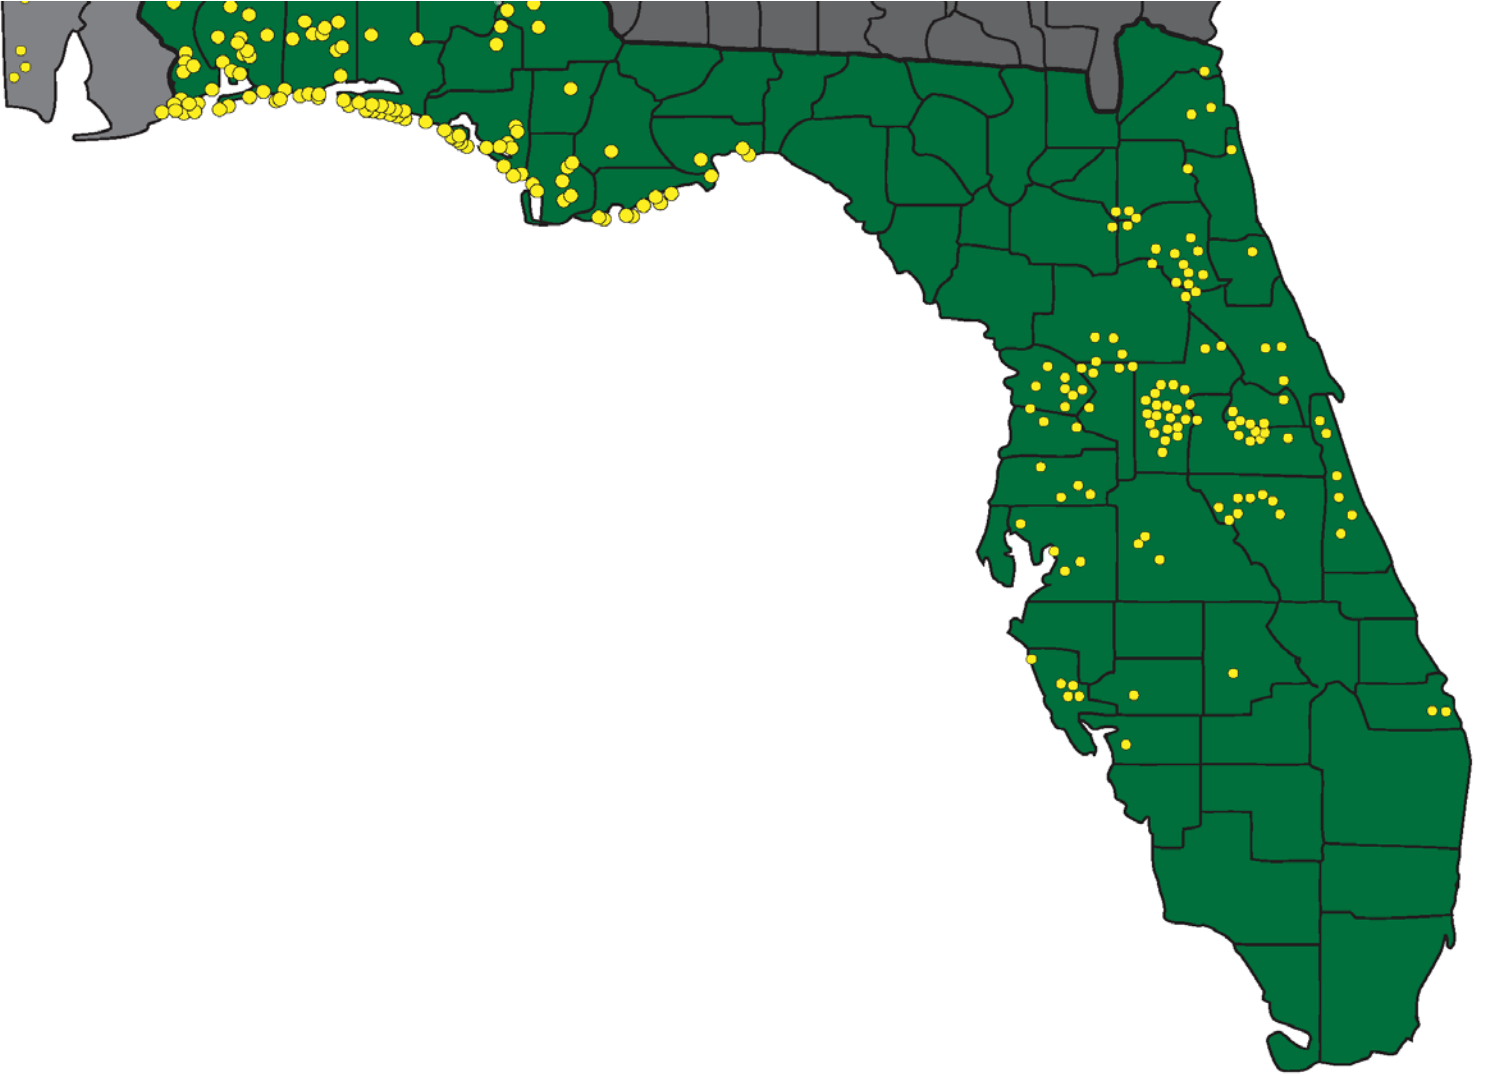

### Emerald Coast Utilities Authority Central Water Reclamation Facility

2010 Collins Center's Sustainable Florida Best Practice Award  
2010 Associated General Contractor's Build Alabama Award  
2011 Florida Institute of Consulting Engineers Engineering Excellence Honor Award  
2011 Water and Waste Digest Top Water and Wastewater Project
